6/3/98

Dear Mr. Gray;

On behalf of the students and staff of Platt, I would like to extend our appreciation for the time spent visiting the school. The opportunity to meet and discuss the operational strategy of *Learning Logic*, incorporated into an unprecedented tour with Governor Rowland created significant anticipation. Fortunately for me, your gracious nature and wisdom allowed Platt Tech to share a moment in time that many students (and staff) will never forget. The morning remains one of the highlights of our academic year.

Be assured that everything you observed in the lab is an everyday occurrence. The manner in which L2 is integrated into the Mathematics program and curriculum has exceeded expectations. In large part, this is due to the Comissioner's commitment and faith in Platt's administrative judgment. By allowing us to design Learning Logic into all 9th and 10th grade classes, the program has provided instructional support for 425 students. A common theme evolved through this process; students do improve in math ability and teachers work hard to maximize the impact of technology.

Enclosed is a brief video description of the event, We hope you have the time to view it. *Learning Logic* has found a home at Platt Tech and we hope to make even greater use of NSCF resources as fiscal constraints allow.

Thanks for giving Platt the chance to work with Gail Fultz, Barry Wood and the staff NSCF to make our school an ever better place to learn.

Sincerely,

Gene LaPorta
