To Whom it may concern,

I am writing to you in support of the National Science Center Foundation, Inc. located in Augusta, GA. They provide my school with the Learning Logic mathematics program. I have been utilizing this program for the past six years, and have seen a marked improvement in math skills of my students.

I am a fourteen year veteran of teaching, and never, before Learning Logic, had a student ever requested to come to my room just to do some extra math. This is a daily occurrence now. Students give up their free time to do extra work, and accelerate in their class. This gives many students the additional assistance they need to be competitive on state and standardized testing. It also lends its self well to acceleration and differentiated curriculum required for gifted students.

I am employed as a full-time Learning Logic instructor, and I presently have sixteen classes that utilize Learning Logic, any where from one to five periods per week. Our class size average is 22 students, so you can see that a very large number of students benefit from this program on a daily basis. Our end of the year testing last year, indicated an eight hundred and thirty eight percent increase in mastery of the curriculum for our top freshmen class who utilizes the lab five periods a week, as opposed to a sixty five percent increase in the traditional classroom with two periods of lab a week.

The numbers speak for themselves. We need the National Science Center Foundation, Inc. to continue to offer this program. Our students deserve it.

Sincerely,

A handwritten signature in black ink that reads "Wendi Myers". The signature is written in a cursive style and is placed over a light gray rectangular background.
